EVELYN GASKIN

evelyngaskin@gmail.com · (650) 334-6547 · linkedin.com/in/evelyngaskin · eggaskin.github.io/evelyneverything

I apply ML and data science across domains: vision, language, and outcome data, and build the tools to make sense of it all.

EDUCATION

Brigham Young University | Provo, UT September 2022 – Present

Expected April 2028 — Computer Science BS, Global and Community Impact minor

3.99 GPA · Dean's List (top 5%) · 1st place in innovation challenge for pitch and product design

- Coursework: software construction, full-stack web programming, predictive modeling theory, data science and ML, linear algebra, statistics. Graduate-level coursework in predictive modeling, model approximation, control, and physical modeling.
- Built a full-stack note-taking app from no experience in 6 weeks, and a chess game in Java with a web API.

SKILLS

Languages: Python, Julia, TypeScript/JavaScript, Java, C/C++, SQL, R, UML

ML & AI: PyTorch, scikit-learn, TensorFlow, Hugging Face, OpenCV, local LLM inference

Tools: Git, Docker, PostgreSQL, Firebase, OpenGL, Blender, Playwright, Electron

EXPERIENCE

Research Assistant November 2022 – April 2024

BYU Computer Vision Lab

- Built a synthetic data framework in Python and Julia that renders 3D scenes (OpenGL fractals, Blender cloth simulation), producing 10K+ densely labeled image pairs with ground-truth correspondences from the render.
- Pre-trained and benchmarked correspondence models on supercomputer clusters. The framework became the data foundation for the lab's later motion work, which improved correspondence.
- Analyzed LLM conversational persuasion data against human samples using chain-of-thought interpretation, sentiment grading, and PCA.

Technical Automation Intern April 2026 – August 2026

Apella Technology, Palo Alto, CA

- Upgraded an Electron app that automates device configuration end to end, using Playwright and Python with shipping and printing APIs. Cut manual data-handling time by 50%; now used 3+ hours daily to configure 6 sites.
- Added validation gates that flag errors before sites reach production, after misprovisioned cameras. Debugged RTSP camera streams.

Data Specialist August 2026 – Present

Ballard Center for Social Impact, BYU

- Coordinated with stakeholders to build and pilot university-hosted app for 150 employees and 14 teams to track activity and performance reviews with UML and PostgreSQL.
- Produce recurring statistical reports and dashboards for 3 project teams.

Teaching Assistant January 2023 – April 2024

Introduction to Data Science and Machine Learning, BYU

- Taught Python for data analysis, visualization, and machine learning to 200+ students. Built autograders, rewrote unclear labs, and trained new TAs.

PROJECTS

Tend — Chronic Health Tracker PostgreSQL, Python, Expo

- Building a symptom tracker that ranks factors associated with symptom changes and corrects for multiple comparisons. 1 test user so far.

fNIRS Hyperscanning Coherence Explorer Python, signal processing, interactive visualization

- Built an exploratory analysis environment for inter-brain coherence in high-dimensional fNIRS time-series data, replacing minimal R plotting.

PUBLICATIONS

- *Elusive Images: Behind Coarse Analysis for Fine-grained Recognition*, WACV 2024
- *Cover the Motion, Not the Look: Motion Coverage Predicts Correspondence Transfer*, ACCV 2026

LEADERSHIP

- Vice President, Training Responsible AI Leaders (BYU). Co-founded the club and run a weekly fellowship for 17 students on AI safety, policy, and governance.
